

Description

Food for special medical purposes.

A high energy, powdered formula with low levels of protein, potassium, phosphorus, calcium, chloride and vitamin A, containing whey protein, amino acids, carbohydrate, fat, vitamins, minerals, trace elements, arachidonic acid (ARA) and docosahexaenoic acid (DHA).

Indications

For the dietary management of kidney disease from birth to 10 years of age.

Dosage and Administration

To be determined by the clinician or dietitian and is dependent on the age, body weight and medical condition of the patient. Use in conjunction with breast milk or infant formula or standard paediatric enteral feed or a mixed diet.

Preparation Guidelines

For bottle fed infants

The standard dilution of 20% is made by adding 1 level scoop of Renastart (7g) to 30ml of water (approximately 1 fluid oz.).

Follow the preparation guidelines carefully. Incorrect preparation can make your child ill.

Wash hands well.

Sterilise feeding equipment according to manufacturer's instructions.

Boil fresh water and leave to cool for no more than 30 minutes to ensure it remains at a temperature of at least 70°C. Do not use artificially softened water or repeatedly boiled water.

Measure out the required amount of water into the bottle.

Using the scoop provided, add the prescribed number of scoops of Renastart into the water, levelling each scoop off with the back of a clean dry knife. Do not press the powder into the scoop.

press the powder into the scoop.
Place the sterilised teat and cap
on the bottle and shake well
until all the powder has dissolved.
Cool to drinking temperature
(approx. 37°C). Always test the
temperature before feeding by
shaking a few drops onto the inside
of your wrist — the feed should feel
warm but not hot.

Renastart is now ready to use.

Any formula remaining in the bottle after 1 hour should be discarded. Do not reheat Renastart once feeding has started.

Other dilutions, tube-feeding and feeding older children:

Preparation to be determined by the dinican or dietitian. Renastart is typically mixed with water as per clinicians/dietitians instructions.

Any feed prepared in advance must be refrigerated and used within 24 hours.

Important Feeding Information

Do not heat Renastart in a microwave as uneven heating may occur and could cause scalding.

Do not boil Renastart.

Infants and young children should be supervised at all times when feeding.
Regular teeth cleaning is recommended.

IMPORTANT NOTICE

Use under medical supervision.

Not suitable for use as a sole source of nutrition.

Suitable from birth to 10 years of age. Regular monitoring of nutritional status and electrolyte levels is required.

For enteral use only.

Renastart

Allergen Declaration

Contains Milk (Milk protein).

Storage

Unopened: Renastart should be stored in a cool, dry place.

Once opened: Use within 3 weeks. Always replace container lid after use. Packaged in a protective atmosphere.

Shelf Life

24 months.

Pack Size/Weight

400g € tin, scoop included.

Potential Renal Solute Load = 125 m0sm/L
